Claim 5; Page 39 45; 62pp; English.

The human EHOC-1 gene (T29600) is derived from the q22.3 locus of chromosome 21, which is the site of mutations that cause progressive myoclonus epilepsy of the Unverricht Lundborg type (EPM1), autoimmune polyglandular disease type I (APECED) and holoprosencephaly (HPE1). It was obtd. by construction of a bacterial artificial chromosome contig of a EPM1-APECED-HPE1 candidate region and use of a direct CDNA selection technique. The gene can be used for prodn. of EHOC-1 polypeptide (R95241), to design diagnostic probes and primers, to supply wild-type gene function to a mutated EHOC-1 gene, to design antisense sequences for therapeutic appln., and to breed transgenic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Therrited disorders (16902) codes for novel human EHOC-17 protein a claim 3; Page 38.40; Sopp; English.

A cDNA clone (766902) codes for novel human EHOC-17 protein (18197), an acceptionline-activated cationic channel permeable to ca2+ ions. A cDNA library from a 14-wk trisomy 21 foetal brain was screened with bacterial artificial chromosomes covering the 21922.3 cregion. Specifically bound material was amplified by PCR and used to probe the cDNA library, yielding the EHOC-17 clone. The clone maps proximal to D21525, i.e. within the consensus region for the maps proximal to D21525, i.e. within the consensus region for the conspirated in progressive myoclonal epilepsy, autoimmune polyglandular disease type I and holoprosencepha!y. A transcript of the EHOC-17 gene is expressed in a wide range of adult tissues. EHOC-17 oligonucleotides can be used to detect mutations and aneuploidies at 21922.3, while entisense oligonucleotides can be used to modulate expression of EHOC-17 polypeptide. Cells cape to modulate expression of EHOC-17 polypeptide. Cells cape to modulate expression of EHOC-17 polypeptide. Cells cytential therapeutic agents. Transgenic animals can be used to setuence 3125 BP; 688 A; 845 C; 928 G; 664 T;

normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Pollowing HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. Clones 260232-265223, 340488-345479, and 484488-489479.

/note="Organ: eye; Vector: lambda gtl0; Site_1: EcoRI;
Site_2: EcoRI; The library used for sequencing was a sublibrary derived from a human retina cDNA library.
Inserts from retina cDNA library DN, were isolated, randomly primed, PCR amplified, Size-selected, and cloned into lambda gtl0. Individual plaques were arrayed and used as templates for PCR amplification, and these PCR products were used for sequencing."

[Anote="Organ: mixed mounts of plasmid DNA from three normalized libraries (melanocyte 2NbHW, pregnant uterus

NDHPU, and fetal heart NDHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization

reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223,

340488-345479, and 484488-489479."

PT Actecting allele 2 of the VNTR (variable number of tandem repeats)

PT Actecting allele 2 of the VNTR (variable number of tandem repeats)

PT POLYMORPHISM at intron 2 of the IL-1 receptor antagonist gene

Claim 7; Page 17; 22pp; English.

CC This PCR primer and primer T89948 are used to amplify intron 2 of the Unman interleukin-1 receptor antagonist gene (IL-1ra) in a novel method con consecutive colitis (UC) in a subject of Jewish ancestry.

CC There is an association between allele 2 of the variable number of tandem crepeats (VNTR) polymorphism at intron 2 of IL-1ra, an important conceptry. This method can be used for the diagnosis and prognosis of UC in Jewish patients for UC and distinguishing UC in humans of Jewish can other inflammatory disease of the bowel.

Jampucins occur.

Interleukin-IRN (IL-IRN) primers 1 and 2 (V32394) were used to amplify the IL-IRN permers 1 and 2 (V32394) were used to amplify the IL-IRN mentered and identify polymorphism of the VWTR region to the IL-IRN and recome a signal threatening diabetic retinopathy. The method involves isolating DNA from a patient and determining the DNA polymorphism pattern of the genes that code for interleukin-I-alpha, interleukin-I-beta and interleukin-IRN. The polymorphic pattern identified is then compared with controls of known DNA polymorphism associated with increased with controls of known DNA polymorphism associated with increased risk of sight threatening diabetic retinopathy. The method may be able to identify diabetic patients at risk before the clinically detectable disorders occur. Polymorphism pattern determination of IL genes involved PCR reactions using primers vizable disorders occur. Polymorphism pattern determination of other genes associated with sight threatening diabetic retinopathy in genomic DNA and therefore, in identifying sentence 17 BP; 5 A; 7 C; 1 G; 4 T;
                                                                                                                                                                                                                                                                                                             ö
a variable number tandem repeat (VNTR) region that gives rise to five allelles. This product is used for predicting the risk of osteoporosis in a subject by determining the allellic and genetic polymorphism pattern for IL-1RN in genomic DNA. A pattern of at least one copy of the IL-1RN allele 2 indicates an increased susceptibility to osteoporosis. The methods can predict low bone mineral density (BMD) and the rate of bone density loss and thereby a susceptibility to osteoporosis. Individuals so identified can then be treated more aggressively to prevent or retard the occurrence of disease.
                                                                                                                                                                                                                                                                                                           Gaps

A method has been developed for the diagnosis of osteoporosis comprising determining the genotype of an interleukin-1 (IL-1) receptor antagonist gene (IL-IRN). The present sequence represents a PCR primer adapted to amplify a portion of intron 2 of an IL-IRN for use in the method of the invention. The method can be used for the diagnosis of disease, including diagnosis of osteoporosis and predisposition or susceptibility
                                                                                                                                                                                                                                             interleukin 1 docus Claim 6: Page 15: 22pp; English.

Claim 6: Page 15: 22pp; English.

the interleukin-1 receptor antagonist (IL-1RN). The specification describes a method for determination of a patient's predisposition to coronary artery disease. The method comprises comparing an allele with a second allele which is predistive of coronary artery disease, where similarity between the first and second alleles indicates a predisposition to coronary artery disease. The method is used to genotype an individual's interleukin (IL)-1 loci, the overexpression of which correlates with coronary artery disease. The method is used to screen a patients' predisposition to coronary

A method has been developed for the disgnosis of osteoporosis comprising determining the genotype of an interleukin-1 (IL-1) receptor antagonist gene (IL-IRN). The present sequence represents the human interleukin-1 receptor antagonist gene. The method can be used for the diagnosis of disease, including diagnosis of osteoporosis and predisposition or susceptibility to osteoporosis and for therapy.

PT Wew method of determining a patient's susceptibility to inflammatory proveduced by detecting the presence of an IL-1 (44112312)

Talsolotype, useful in designing treatment strategies that modulate produced by the IL-1 (44112312)

PT Claim 31: Apge 31: 49pp: English

C Claim 31: Apge 31: 49pp: English

C C an inflammatory disorder. The method comprises the detection of an inflammatory disorder. The method comprises the detection of an inflammatory disorder. The method comprises the method from the carlent, where its presence indicates susceptibility to an inflammatory disorder. The method comprises in the method for detecting the IL-1 (44112312) haplotype in a sample obtained from the carlent, where its presence indicates susceptibility to an inflammatory disorder. X16607 to X16631 represent PCF primer used in the method for detecting the IL-1 (44112312) haplotype. The method provides kits for disorders, including coronary artery disease, osteoporosis, nephropathy in disorders, including coronary artery disease, osteoporosis, nephropathy coronary artery disease, osteoporosis, nephropathy corpused and alletes of the haplotype can be applied to particular inflammatory coronary artery disease. Systemic lupus alletes of the haplotype enables determination of which alletes are disorders, including diabetic retinopathy, juvenile chronic arthritis, producinate the activity of proteins produced by the IL-1 gene cluster of that modulate the activity of proteins produced by the IL-1 gene cluster of inflammatory diseases, and insufficient IL-1 production appears to act contrally in the pathology of these diseases. Therefore, the use of IL-1 gene clusters is useful in determining genetic susceptibility to gene clusters is useful in determining genetic susceptibility to with a molygenic commonent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 1; Fig 1a; 128pp; English.
This nucleotide sequence codes for the heavy chain variable region (WH) (WH)881) of human carcinoembryonic antigen (hCEA)-specific antibody CEA6. WH (T72126-32) and VL (T72133-35) gene sequences were determined for anti-hCEA antibodies CEA1-CEA7 (see W19876-85) that had been obtained by selection from a universal phage display library. A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               - bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Specific binding members for human carcinoembryonic antigen - bito the A3-B3 extracellular domain of hCEA and are substantially non-cross-reactive with human liver cells; used for diagnosing

Example 4: Page 63-64; 110pp; English.

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural construct comprise at least one tetranectin trimerising structural construct comprise at least one tetranectin trimerising structural construct (TYES) which is covalently linked to at least one heterologous moiety, the TYES being capable of forming a stable complex with 2 other TYES, with the proviso that the heterologous moiety is different from carry of the fusion proteins clinkernv12, Merryn12, Merryn12, Herryn13, GW4261, THE TYES can be used for the construction of conjugates with heterologous moieties such as a ligand binding structure, a redioactive moiety, a cytokine, an in situ activatable substance, an enzyme, a radioactive moiety, a cytokine, an non-proteinaceous polymer, a photo construct to a tranget. They can be used as vehicles for a radioactive moiety fragments into oligomeric or multivalent entities for generating chimeric artificial antibodies having preselected pharmacoxinetic and/or pharmacynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of tissue or for delivering an imaging or toxin-conjugated antibody to a tumour. They can also be used for prevention or treating a disease or the formatic or a release of the material for a wide variety of conjugates. The cans are as a conformative for a wide variety of conjugates. The restrict of a release of confugates. The restrict of a prevention of trimeries of confugates a stable structure which can act as a conformative which energy and the construction of trimeries of a nucleotide sequence encoding a Cabá antibody single-chair (sock) fragment. This is used in the construction of t
                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CEA6 antibody single-chain Fv (scFv) fragment encoding DNA.

                  with human liver cells, and preferentially binds to the A3-B2 extracellular domain of hCEA and/or to cell-associated hCEA over hCEA over soluble hCEA. Preferred (A) include pairings of VH and VL sequences from CEA-T, or their CEA sequences, as well as CEAE, VH and VL variants. (A) is used to detect cells expressing hCEA, in vivo or in vitro, especially tumour cells for diagnosing cancer sequence 369 BP; 85 A; 101 C; 109 G; 74 T;
     is non-cross-reactive
                                                                                                                                                                                                                                                                                                                                         ö

The products for diagnosis, prevention and treatment of hypoglycaemia, products for diagnosis, prevention and treatment of hypoglycaemia, diabetes, neuronal disorders and tumours.

The diabetes, neuronal disorders and tumours.

A method has been developed for testing the developmental status in particular form of the mammal; and/or (b) determining the parcreatic cells (PGS) of a mammal; and/or (b) determining the cor status of Pax6 mRNA in PCs of the mammal; and/or (c) comparing or status of Pax6 mRNA and/or Pax6 protein with the corresponding level in normal PCs. The present sequence encodes pax6 protein. The method can be used for determining the developmental status of PCs as indicative of hypoglycaemia, diabetes, neuronal disorders or temporates. The products can be used for developing agents for treating or reventing such disorders.

                                                                                                                                                Froucts for diagnosis, prevention and treatment of diabetes.

Products for diagnosis, prevention and treatment of diabetes,

products for diagnosis, prevention and treatment of diabetes,

neuronal disorders and tumours

Clavel and the correct and tumours

Clavel or status of Paralish.

A method has been developed for testing the developmental status in parcreatic cells (PC's) of a mammal comprising: (a) determining the level or status of Paral protein in PC's of the mammal; and/or (b)

Clavel or status of Paral mixed and the mammal; and/or (b)

determining the level or status of Paral mixed in PC's of the mammal;

and (c) comparing the level or status of Paral mixed in PC's of the mammal;

clavel or responding level in normal PC's. The present invention also describes a nucleic acid sequence encoding a functional and expressible Para protein, for the preparation of a therespectic composition for treating, preventing and/or delaying diabetes and/or a neuronal disorder in a mammal. The present sequence encodes a Para protein. The method can be used for determining the temoris. The products can be used for developing agents for treating the those diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 30; Page 82-84; 112pp; English.

This full-length cDNA clone, designated do568 11, codes for a novel secreted human protein (see W79094). It was isolated from a human adult testis cDNA library using methods which are selective for CDNAs encoding secreted proteins, or was identified as encoding a secreted or transmembrane protein on the basis of computer analysis of the encoding protein. The nucleotide sequence shows homology to some database sequences. The invention provides cDNA clones (see V61477-87) from human foetal kidney, adult testis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-SEP-1998.

Tproliferative diseases

Claim 12; Page 67-70; 95pp; English.

This CDNA clone codes for a new human prenylcysteine carboxyl

This CDNA clone codes for a new human prenylcysteine carboxyl

C methyltransferase (PCCMT, see W67730) involved in post-translational

C modification of prenylated proteins. It was isolated following

an EST database search for mammalian sequences related to the

C saccharomyces cerevisiae isoprenylcysteine methyltransferase Steld

G see PR primers (see W1415-16) based on an isolated EST were

CC used in a PCR amplification of human HL60 cell cDNA. A PCR product

CC (see V81417) was used to screen an HL60 cell cDNA. A PCR product

CC (see V81417) was used to screen an HL60 coll incary to isolate

CC steld was 26%. Also new are an expression vector containing DNA

CC steld was 26%. Also new are an expression vector containing DNA

CC cncoding human PCCMT. hosts transformed with this vector, compounds

CC for PCCMR: and a method for screening for, and isolating,

CC inhibitors of PCCMT. The inhibitors are used to treat inflammation,

CC cancer and other hyperproliferative diseases such as psoriasis, e.g.

CC by inhibiting prenylation of Ras proteins. PCCMT is also used as a
and adult or foetal brain cDNA libraries that code for secreted proteins (see W79087-97). These clones are deposited as ATCC 98364. The polynucleotides and proteins are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional, immune stimulating (e.g. as cativities include nutritional, immune stimulating (e.g. as cativitylinhibin, chemotactic/chemokinetic, haemostatic and thrombolytic, receptor/ligand, antiinflammatory, cadherin/tumour invasion suppressor and tumour inhibition activities. The polynucleotides are also stated to be useful for gene therapy. Sequence 2245 BP; 443 A; 632 C; 617 G; 546 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                by inhibiting prenylation of Ras proteins. PCCMT is also used as a reagent for carboxy methylation of substrates, e.g. to produce functional Ras proteins, and for raising Ab. When over-expressed in a cell, peptide fragments of PCCMT may act as inhibitors. Fragments of PCCMT mucheic acids are used as probes to isolate related sequences from other sources, and nucleic acids expressing a dominant negative variant of PCCMT can be used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New mammalian prenylcysteine carboxyl methyltransferase - and its
inhibitors, useful for treating inflammation, cancer and other
proliferative diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              12-ARR-1999 (first entry)
Human prenylcysteine carboxyl methyltransferase cDNA.
Prenylcysteine carboxyl methyltransferase; PCCMT; human;
inhibitor; screening; inflammation; cancer; cell proliferation;
psoriasis; Ras protein; therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                        resolution and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders claim la; Page 196: 280pp; English or blood disorders claim la; Page 196: 280pp; English or blood disorders claim la; Page 196: 280pp; English or blood disorders and their encoding nucleic acid sequences. The products of the invention are useful for preventing, treating or ameliorating medical conditions are useful for preventing, the presence or amount of expression of diagnosed by determining the presence or amount of expression of the new polypeptides in a sample or by determining the presence or amount of expression of the new polypeptides. Specific uses are absence of mutations in the new polynuclectides. Specific uses are absence of mutations in the new polynuclectides. Specific uses are absence of mutations in the new polynuclectides. Specific uses are absence of mutations in the new polynuclectides. Specific uses are described for each of the 70 polynuclectides. Specific uses are disorders, developmental abnormalities and focetal deficiencies, blood disorders, leukenias, diseases of the immune system, autoimmune diseases, hepsitic and renal diseases of the immune system, autoimmune diseases, hepsitic and renal diseases. lymphomas, inflammation, allergies, asthma, sepsis, diabetes, Alzhritis, psoriasis, digestive/endocrine disorders, of the invention are content and AIDS. The human secreted proteins of the invention are content and and all and an are content and a

New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disolateds, immune diseases, inflammation or blood disorders claim la: Page 230; 280pp; English.

This invention describes novel isolated human secreted proteins and their encoding nucleic acid sequences. The products of the invention are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions e.g. by protein or gene therapy. Also pathological conditions can be the new polypeptides in a sample or by determining the presence or amount of expression of the new polypeptides in the new polynucleotides. Specific uses are described for each of the 70 polynucleotides, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative diagnosis or treatment of cancer, tumours, neurodegenerative diagnosis.

                                                  The following the colon, vector: pT7T3D-pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from REH colon tumor, and was then primed with a Not I coligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 constructed by Bento Soares and M. Fatima Bonaldo (Soares4).
